A plastics and composites engineer can be involved in the development, planning, supervision, or construction of the materials, methods, and equipment for the production of industrial or consumer goods. Plastics and Composites engineers will help to solve the complex problems associated with plastics or composites manufacturing operations. Graduates work in teams with engineers, scientists, and technicians to solve manufacturing-related problems including environmental impacts of production.

- **ABET Accredited**
- **Bachelor's of Science**
- **148 total credits**

"This program is hard work and requires a strong commitment. In my opinion, dedicated individuals get more opportunity and experience in this program compared to other majors at WWU. Professors in this program are passionate about what they teach and truly want to see students succeed."

- Kevin Slonecker: Plastics & Composites Engineering
Students emphasize in polymers and composites.

Plastics and Composites Engineering
Students enrolled in Western’s Plastics & Composites Engineering (PCE) program study the relationship between molecular structure, processing, and properties of polymers and composites. The PCE curriculum prepares graduates who understand and apply established scientific and engineering knowledge to support engineering activities in manufacturing environments. The technical curriculum is built upon a firm base of mathematics, physics, chemistry, and materials science. Practical experience in design, materials, processing, economics, testing, and analysis is a crucial part of the hands-on curriculum that is provided in the program’s extensive and well-equipped laboratory facilities. Western’s PCE program is one of six in the nation and the only one on the west coast.

Major Timeline
Apply to WWU and declare your pre major
Take pre major courses in year one and two
Apply to major - end of winter quarter year two
